Table of Tables:

Table of Figures:

1. Introduction:

The project given to us by the London Met University is about creating our own e-commerce website that sells Japanese Bonsai plants. We were instructed to only make use of HTML, CSS and JS to make a basic functioning website. We as a group have created our own version of the Bonsai e-commerce website according to the provided guidelines.

The main goal of this project was to provide us with hands on experience of creating a website and also designing it. It is meant to be a means of showing us students, how the real-life work experience is for a web developer. This project also hoped to enhance our skills regarding effective use of Java Script and CSS to make our website more user friendly and to also teach us about search engine optimization.

During the course of this project HTML, CSS and JS were used accordingly to match the goal that we as a group had set. HTML was basically used to structure the contents of our website and lay the foundation for CSS and JS. The use of CSS was done to mainly beautify our webpages and to also manage how the contents are aligned. JS was used mainly to input logical tasks such as image sliders, forms etc.

This project was completed as a group and none have contributed more than the other.

2. Discussion and Analysis:

2.1 Selected Text Editor:

This project was fully done using Sublime Text. This text editor provides a dynamic way to code and also helps to structure our website properly. It is one of the most popular text editors available today. Hence, it was a good choice for this group project.

Sublime Text editor is a sophisticated and dynamic text editor that provides a wide array of tools and is extensively used by the developers. It contains variety of features such as Syntax Highlight, Auto Indentation, File Type Recognition, Sidebar, Macros, Plug-in and Packages which make it easy for working with codes. (Guillermo López-Anglada, 2022)

2.2 Tool used for developing wireframes:

For developing the wireframes for our webpages, Balsamiq Wireframes was used. This tool albeit not the most popular but does provide a huge array of simple and dynamic methods for beginners like us to create a simple wireframe.

Balsamiq Wireframes is a graphical user interface wireframe creating application. In Balsamiq the designer can arrange pre-built widgets while using a drag and drop editor. The application is available as a desktop version and also in a cloud version for google drives or other such cloud software. (Kelv, 2023)

3

2.3 Home Page:

This is the main face of the website. When users open the website, the home page provides a general overview of the whole website. It gives an idea about what the website is for. Users can get an early idea about the products that our e-commerce site supplies. This page also gives information on the history of bonsai plants to grasp the customers attention on these plants.

2.3.1 Wireframe of Home Page:
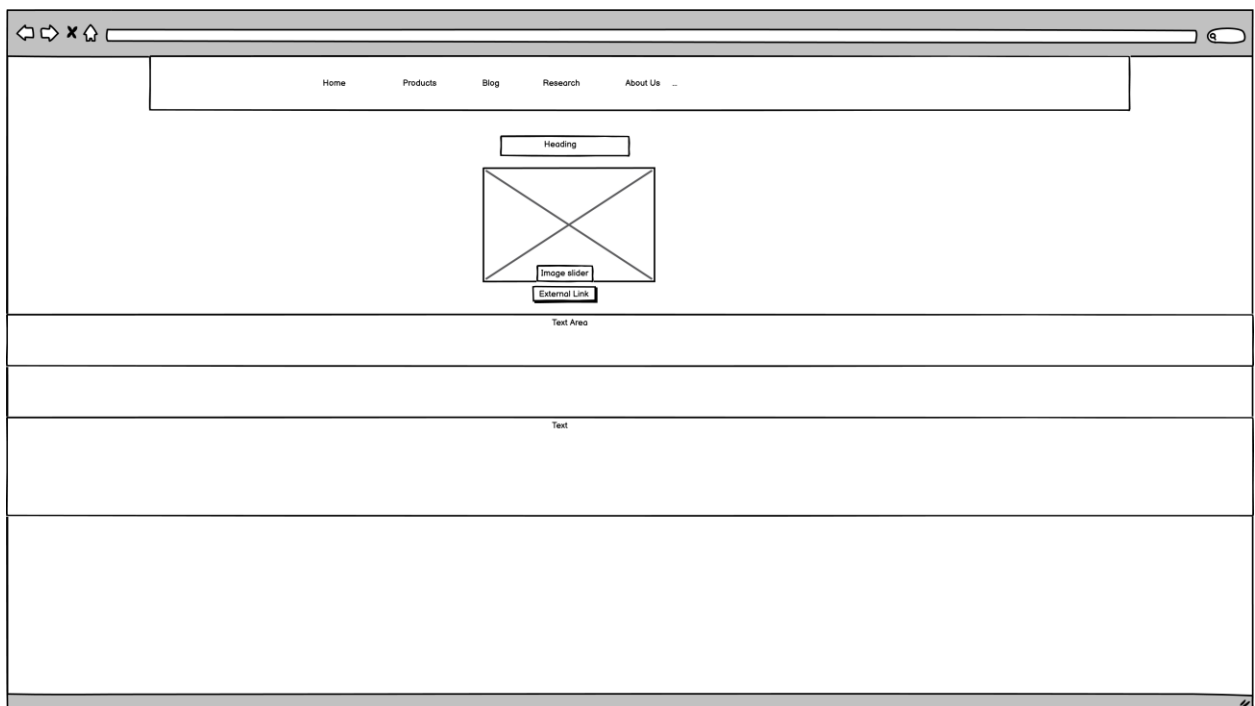

Figure 1:Home page wireframe

2.3.2 Screenshot of Home Page:
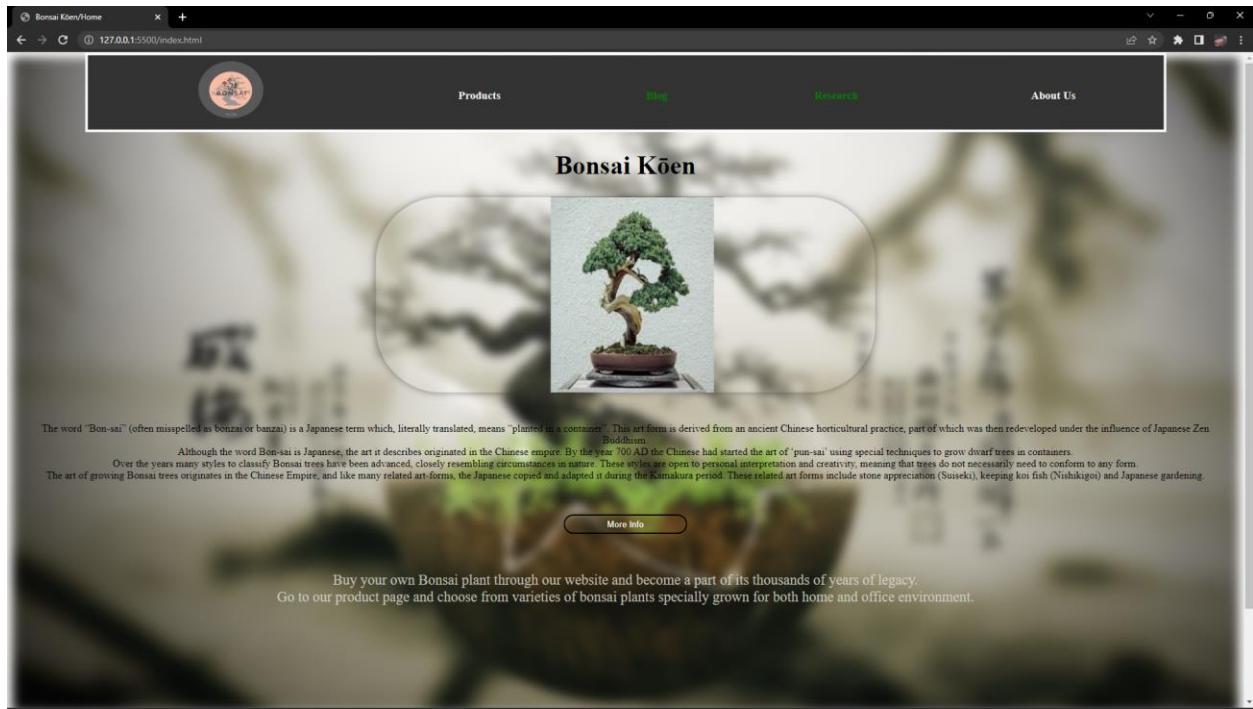

Figure 2:Home page screenshot

2.4 Products Page:

This page contains the list of all available products on our site. Here, the description of each and every product is also provided. Hence, the customers can effectively choose a plant that is to their liking very easily. In addition to plants, we also have a variety of seeds and soil required and also the information on how to take care of said Bonsai plants as they require extensive care. This page also has a cart where customers can add multiple orders at the same time along with an information form.

2.4.1 Wireframe of Products Page:
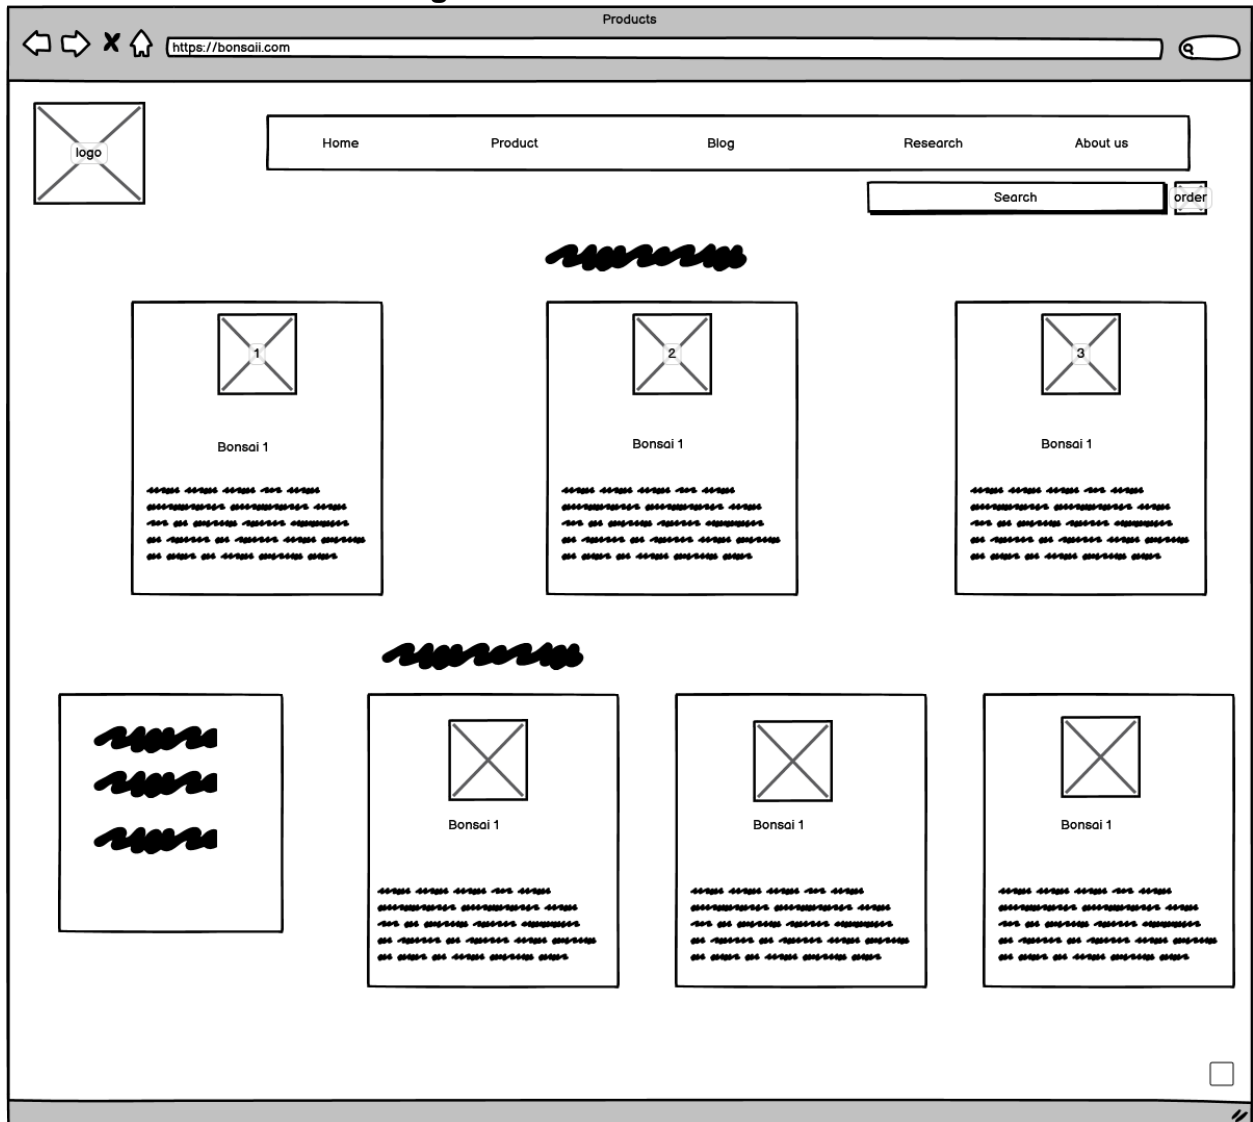

Figure 3:Products page wireframe

2.4.1 Screenshot of Products Page:
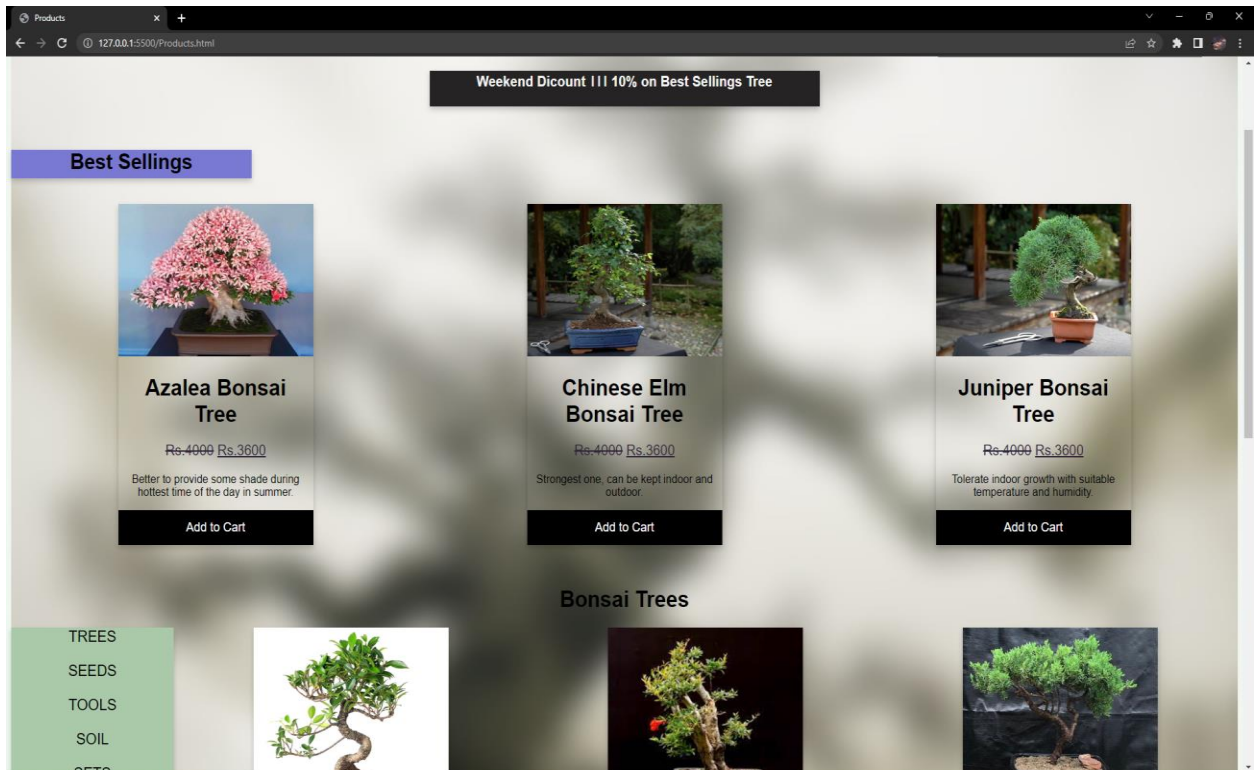

Figure 4:Products page screenshot

2.5 Blog Page:

This page contains a blog on information technology and its pros and cons. It is an informative page that discusses and analyses the world of today and how heavily it is dependent on technology. The page also contains a variety of images and a video to provide deeper insight on this topic, making effective use of multimedia for imparting knowledge on the matter. In this page we delve deeper into the world of the impacts that technology has on all of us.

2.5.1 Wireframe of Blog Page:
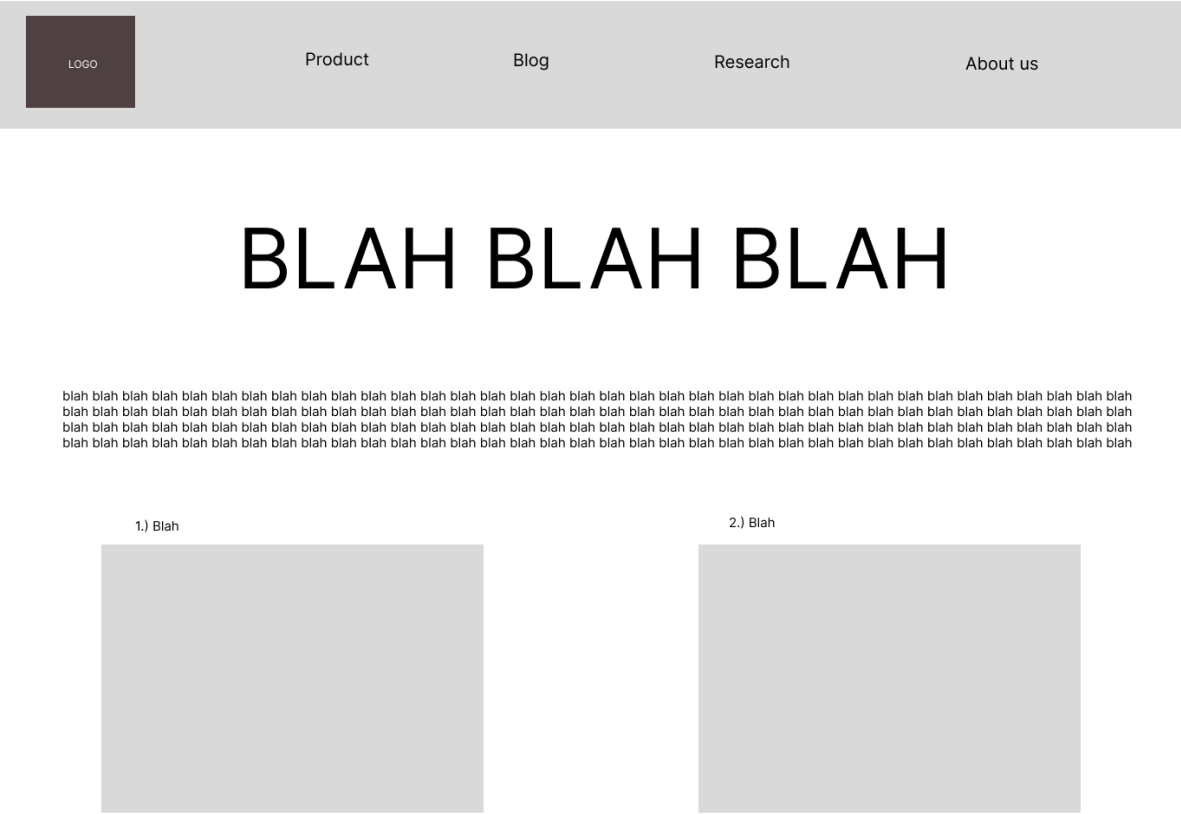

Figure 5:Blog page wireframe

2.5.2 Screenshot of Blog Page:
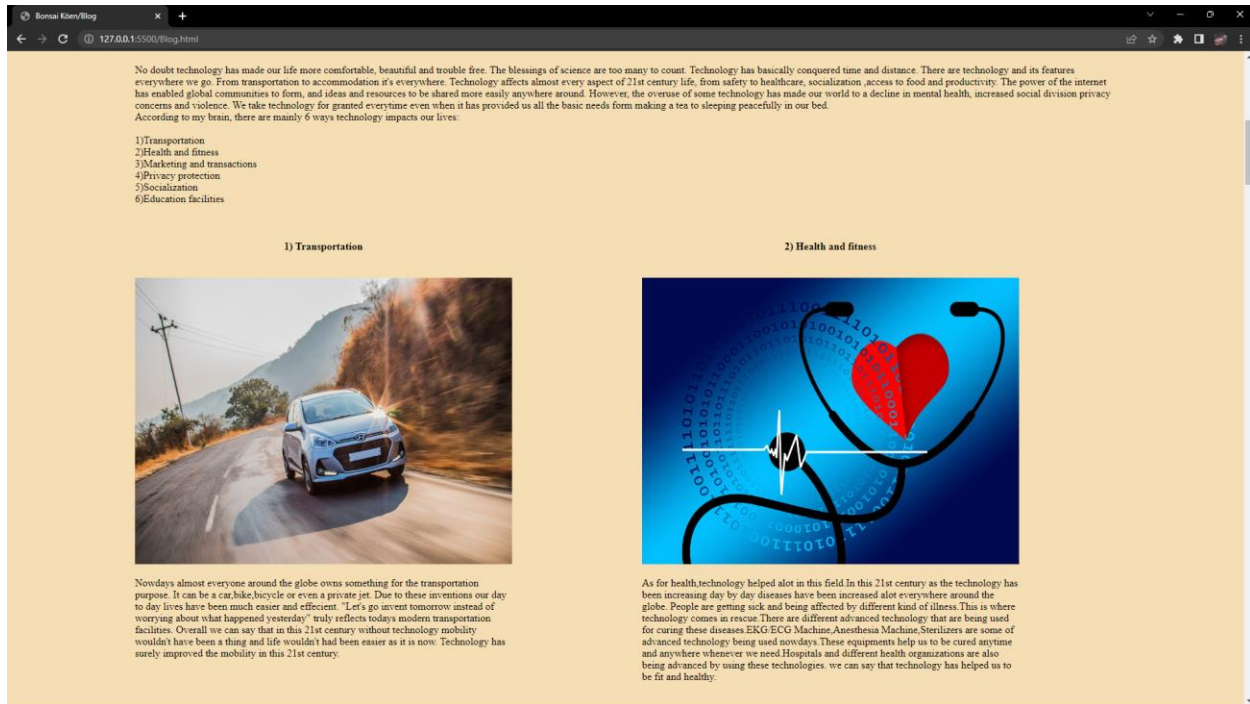

Figure 6:Blog page screenshot

2.6 Research Page:

This page contains the comparison between our webpages and the other external websites from which we took inspiration. In this page we have the images of our webpage and the external website's webpage and we compare the similarities between the two. It gives an idea about how our project was formed. The links to each and every external website has also been provided in case for further needs.

2.6.1 Wireframe of Research Page:
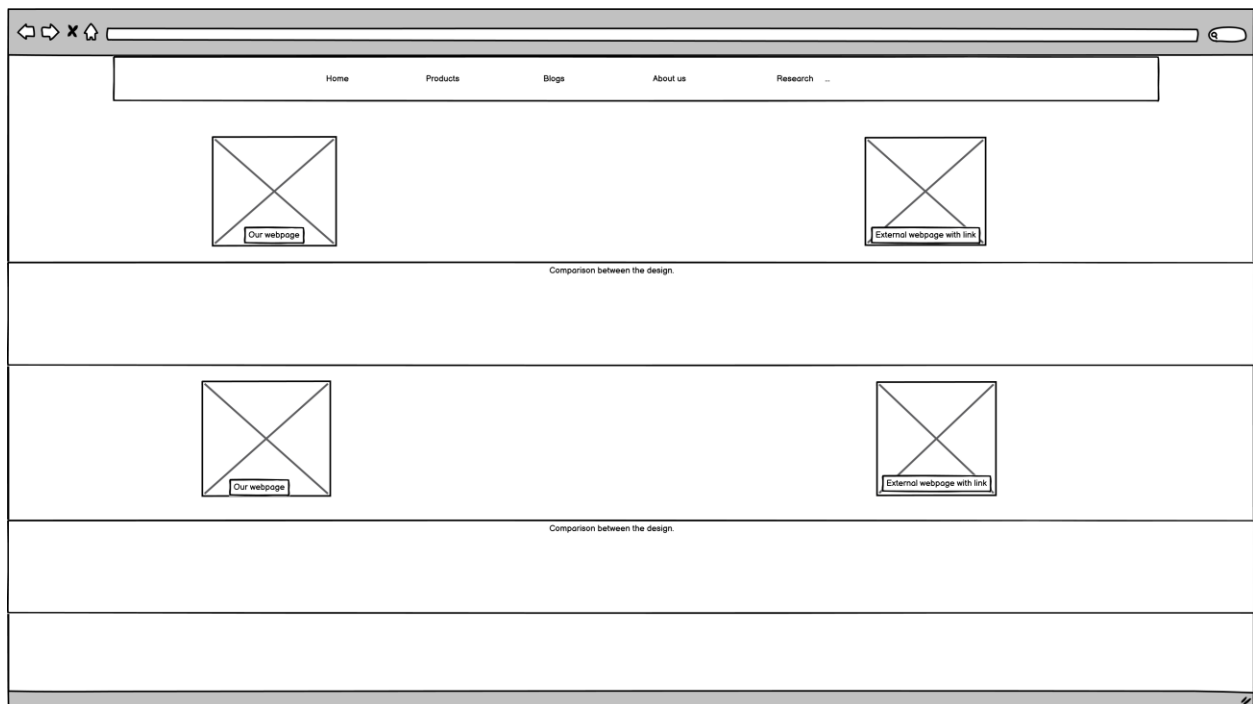

Figure 7:Research page wireframe

2.6.2 Screenshot of Research Page:
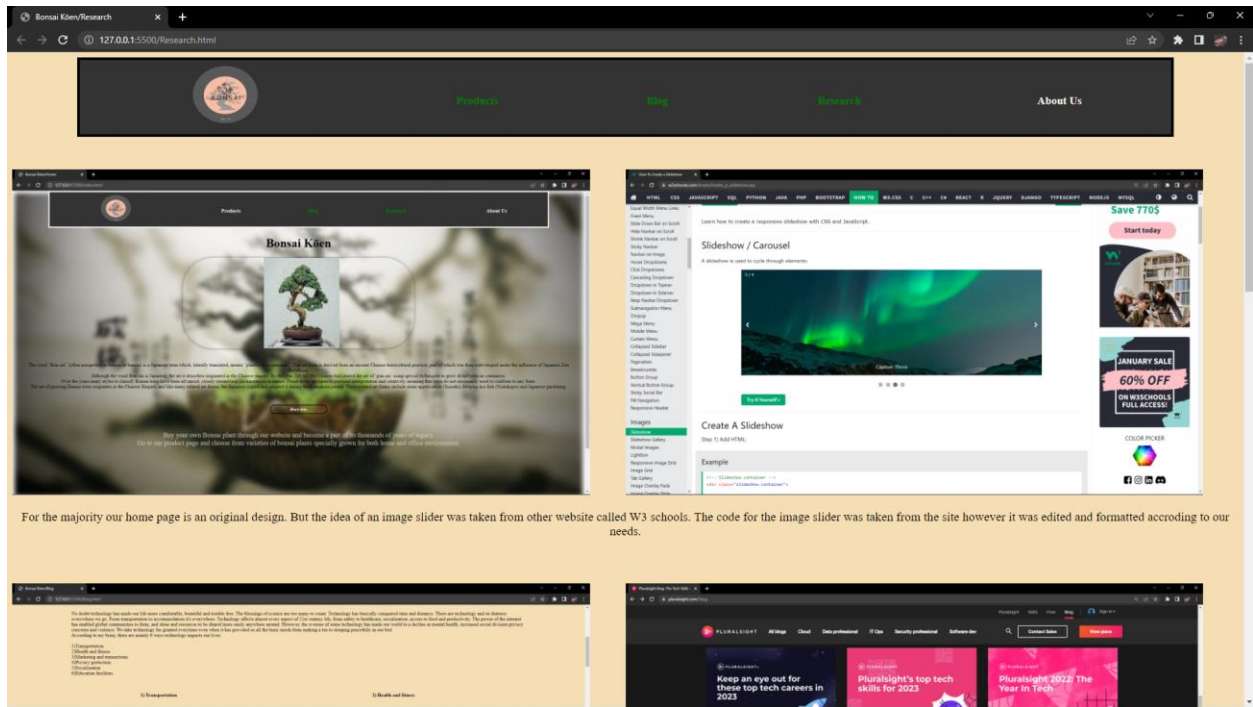

Figure 8:Research page screenshot

2.7 About Us page:

This page contains the portfolio of all the members involved in this project. This page also provides the member's contact information, for any important business. In this page all the members are displayed along with their display picture.

2.7.1 Wireframe of About Us Page:

3. Testing:

3.1 Test 1-CSS video controls:

Test No.	1
Objective:	To inspect if the video in our blog works or not.
Action:	A video was coded in Html as "`<video style="float: left; padding-left: 345px;" width="1000"controls>` `<source src="/Videos/The Pros and Cons of Technology with Jared Leto and Walter Isaacson.mp4" type="video/mp4"> </video>`"
Expected Result:	The video will play with a feature to play or pause the video.
Actual Result:	The video was able to play or pause.
Conclusion:	The test was successful.

Table 1:To test whether CSS video controls work or not.

3.1.1 Output Result:
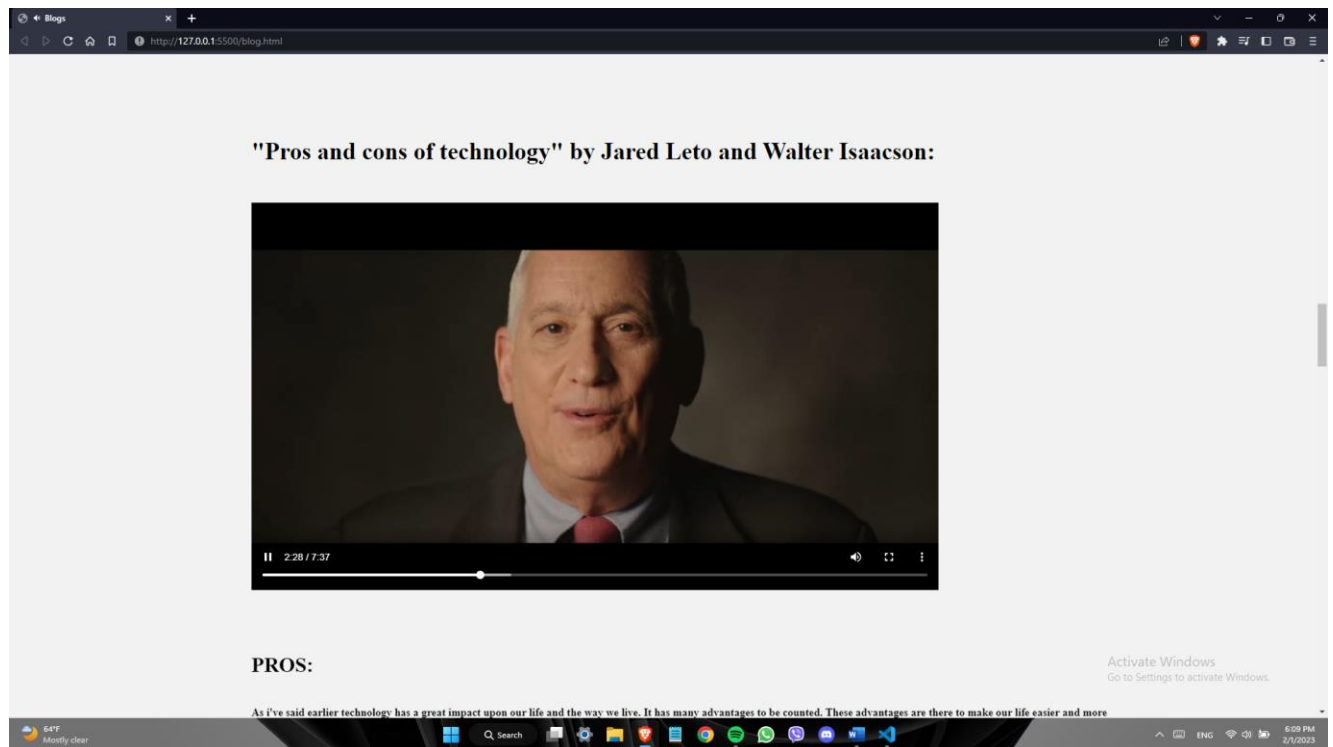

Figure 12:Screenshot of result of test 1

3.2 Test 2-Testing of JavaScript form Product (Order):

Test No.	2
Objective:	Inspect the form of order.
Action:	1. Filling the form completely. 2. Incompletely filling the form.
Expected Result:	1. If form is completely filled, then it will alert us popping messages. 2. If form is incompletely filled, then will alert us popping messages.
Actual Result:	1. When form is completely filled, then it alerted us popping "Your order is registered." 2. When form is incompletely filled, then it alerted us popping "Please fill the form."
Conclusion:	Test was successful.

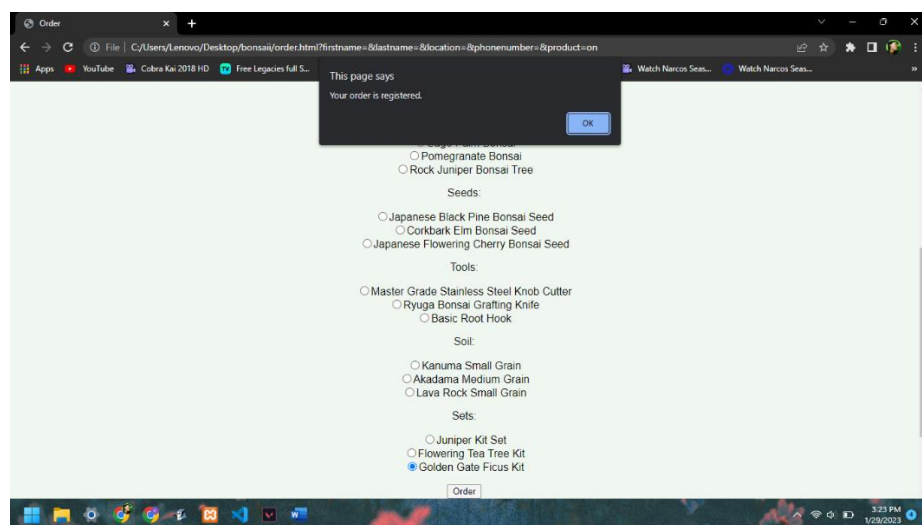

Figure 14:Screenshot of result of test 2(2)

3.3 Test 3-Whether Java Script image slider works or not:

Test No.	3
Objective:	To check whether the image slider works or not.

Action:	The following actions were performed:
	 ``
	<div class="slider-wrapper">
	        <div class="slider">
	        <div class="image" id="img" >
	        <img src="e.jpg">
	     </div>
	     </div>
	     </div>
	<div>
	     <script>
	        var slides = ['a.jpg' , 'b.jpg' , 'c.jpg' ,'d.jpg', 'e.jpg'];
	        var x=0;
	        var imgs = document.getElementById('img');
	        setInterval(slider, 3000);
	
	        function slider()
	        {
	         if(x < slides.length)
	         {
	
	         x = x + 1;
	        }
	        else
	        {
	          x = 1;
	        }
	        imgs.innerHTML= "<img src="+slides[x-1]+">";
	        }
	     </script>
	     </div>
	``

Expected Result:	The image in the slider would change every 3 seconds.
Actual Result:	The image in the slider changes every 3 seconds.
Conclusion:	The test was successful.

Table 3:TO test whether image slider works or not.

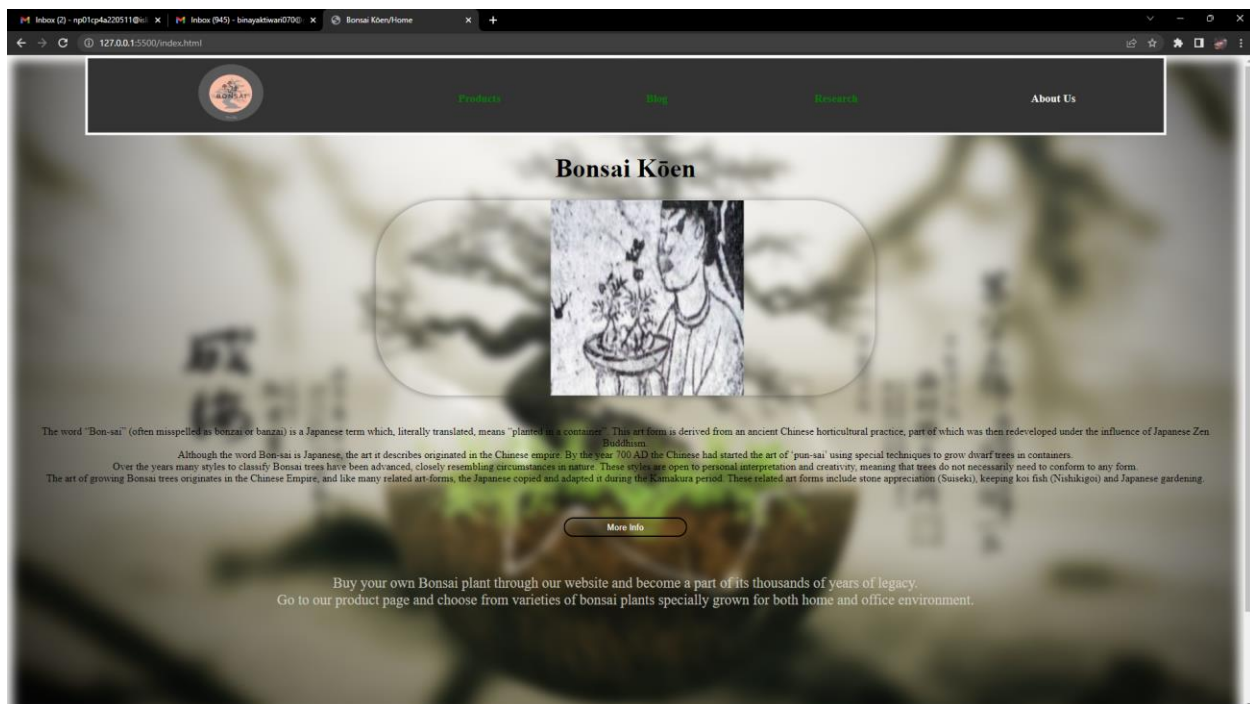

Figure 16:Screenshot of result of test 3(2)

20

3.4 Test 4-Checking whether the pop-up message of added to cart works or not:

Test No.	4
Objective:	To check whether the pop-up message of added to cart works or not.
Action:	The following actions were performed: 1.The add to cart button was clicked on the products page.
Expected Result:	The pop-up message would be shown.
Actual Result:	The pop-up message was shown.
Conclusion:	The test was successful.

Table 4:To test whether the pop-up message shows or not.

3.4.1 Output Result:
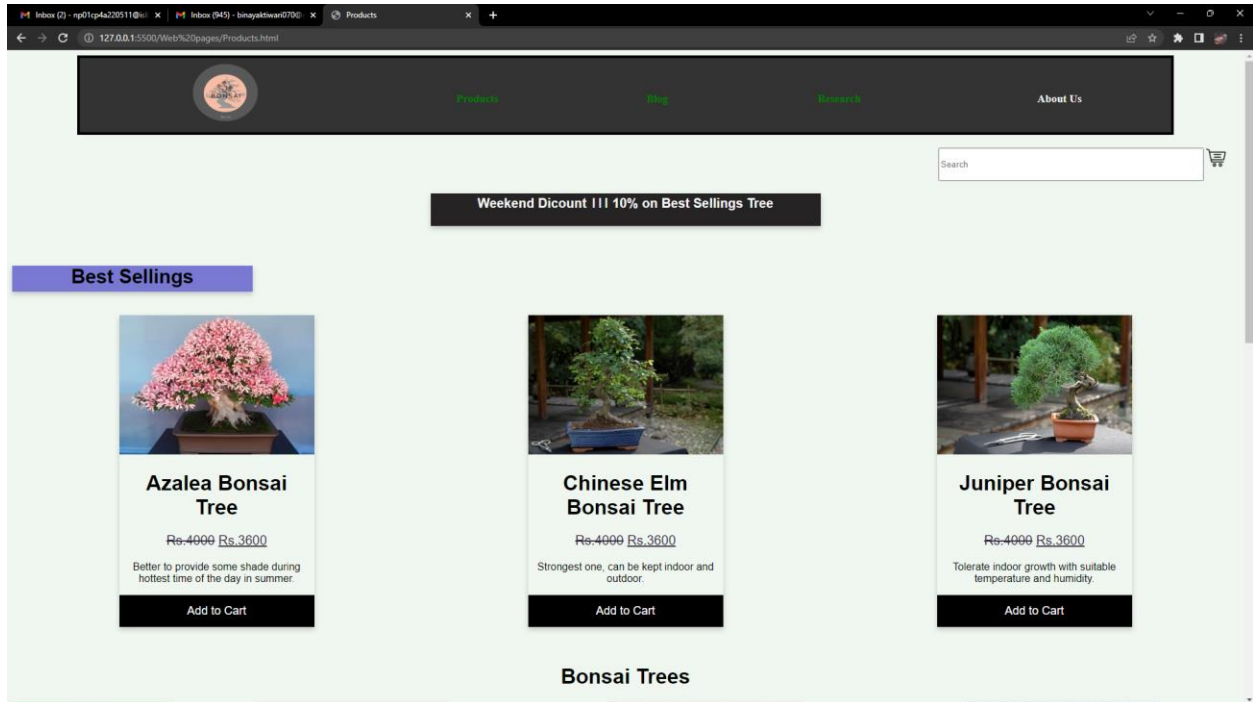

Figure 17:Screenshot of result of test 4(1)
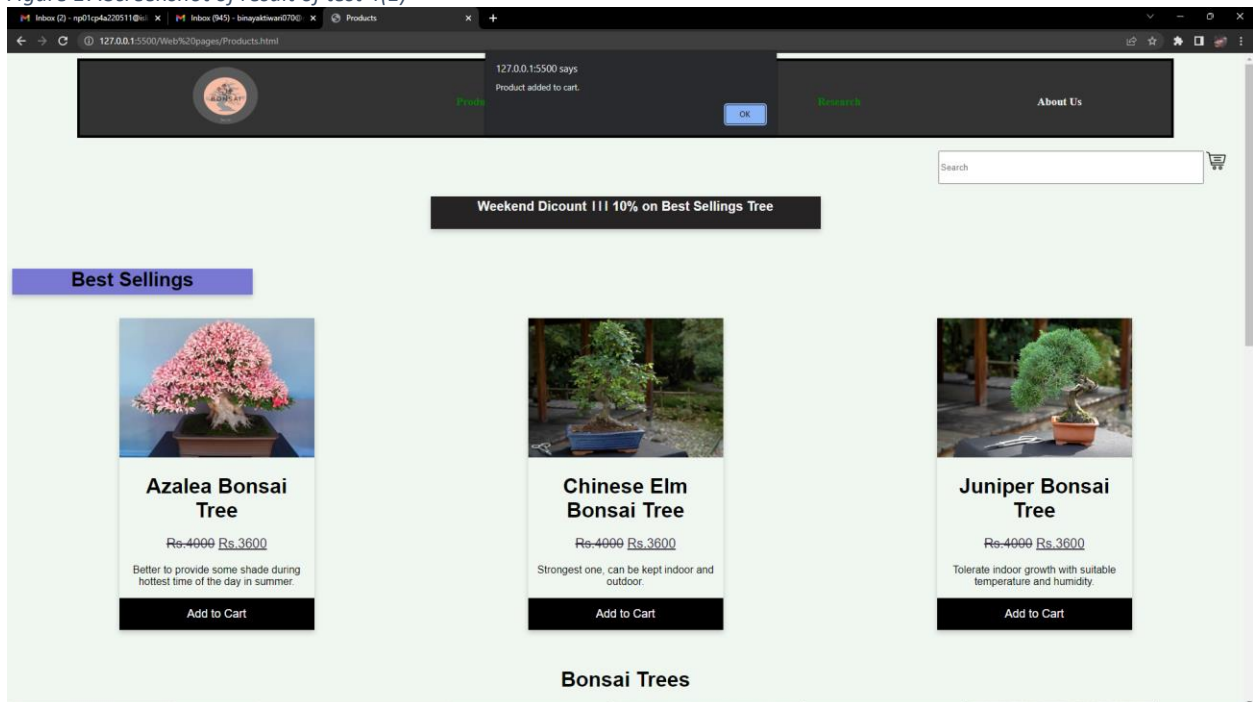

Figure 18:Screenshot of result of test 4(2)

3.5 Test 5-To check whether the navigation bar hover effect works or not:

Test No.	5
Objective:	To check whether the nav bar hover effect works or not.
Action:	The following actions were performed: 1.The mouse pointer was kept on top of nav bar. 2.The mouse pointer was kept unmoved for few seconds.
Expected Result:	The nav bar contents would get blue background due to hover effect.
Actual Result:	The nav bar contents get blue background due to hover effect.
Conclusion:	The test was successful.

Table 5:To test navigation bar hover effect.

3.5.1 Output Result:
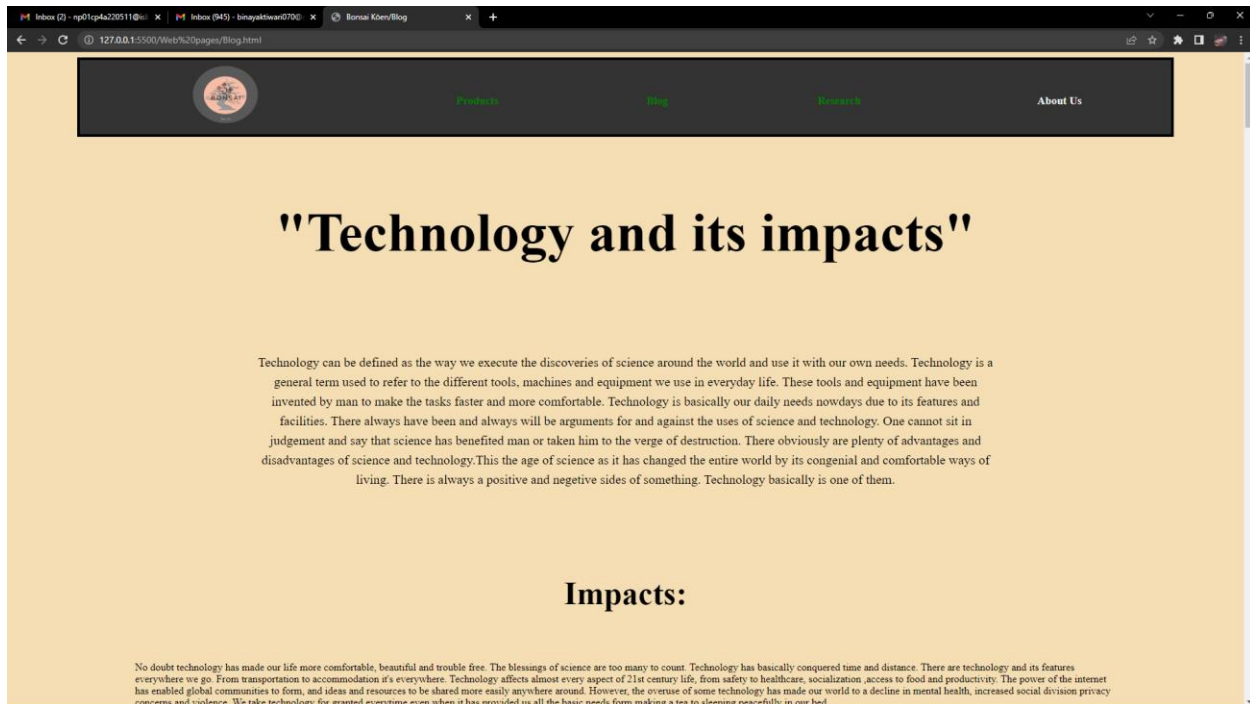

Figure 19:Screenshot of result of test5(1)
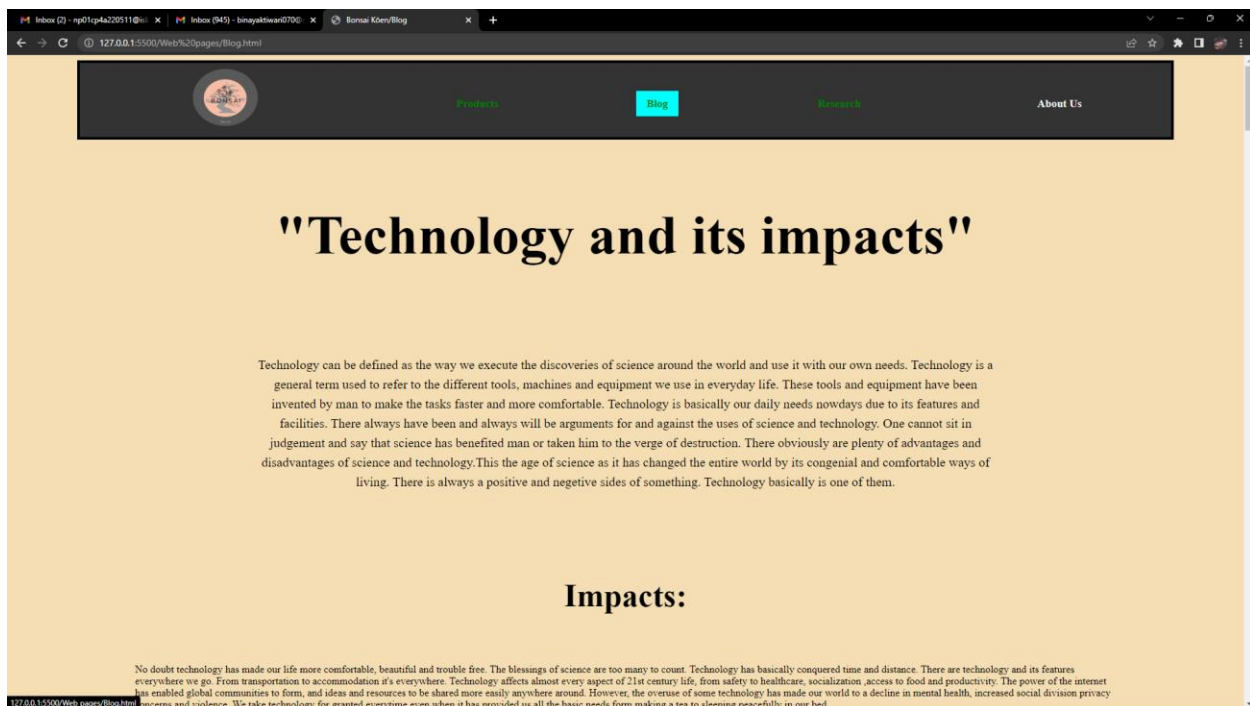

Figure 20:Screenshot of result of test5(2)

4.Conclusion:

This project has been a really fortunate learning opportunity for us. During the course of this project, we as a group have faced many ups and downs. It really was an eye opener of an experience trying to adjust the CSS and JS properties for every single line. It was especially hard to cope with frequent errors related to CSS stylings. Even maintaining the structural integrity of the HTML tags posed to be quite difficult.

In our project we made extensive use of CSS and JS properties where we saw fit. And it shaped the way to how our website looks now. In the project, the home page has an image slider created using JS functions. The decision to put an image slider on the home page was made as the products page was too crowded. The products page has an extensive array of bonsai plants of different types. We also have incorporated other necessities such as seeds and soil and equipment etc. The items on the product page are displayed on a card format. It makes the page look less crowded and navigation of the page becomes easier. The page also has its own form and a cart system. The other webpages were created to be relatively simple as they are just for providing information.

The Blog page makes use of different images and videos while the about us page uses both CSS and JS to be as user friendly as possible. The research page contains the comparison between the webpages and the sites that inspired such designs.

During research for completion of the project we found many interesting tricks and other things for creating a website. We found that using Java Script makes the website more intricate and adds quality of life features. The use of CSS is mostly in designing and advanced CSS is harder to manage unless one has had extensive practice.

So, this project has been a great self-learning journey by researching different sources in order to complete the website. The project was completed with the effort of the whole group and it really was a great insight into co-operation towards a common goal.

   <div class="bg-text2"><!--Bonsai history-->

   <p> The word "Bon-sai" (often misspelled as bonzai or banzai) is a Japanese
term which, literally translated, means "planted in a container". This art form is derived
from an ancient Chinese horticultural practice, part of which was then redeveloped
under the influence of Japanese Zen Buddhism.</br>

      Although the word Bon-sai is Japanese, the art it describes originated in the
Chinese empire. By the year 700 AD the Chinese had started the art of 'pun-sai' using
special techniques to grow dwarf trees in containers.</br>

      Over the years many styles to classify Bonsai trees have been advanced,
closely resembling circumstances in nature. These styles are open to personal
interpretation and creativity, meaning that trees do not necessarily need to conform to
any form.</br>
```

33

The art of growing Bonsai trees originates in the Chinese Empire, and like many related art-forms, the Japanese copied and adapted it during the Kamakura period. These related art forms include stone appreciation (Suiseki), keeping koi fish (Nishikigoi) and Japanese gardening.

          <p>Different sizes of Akadama soil are perfect for those looking to use in
different size pots or to mix of other materials.

              Akadama is one of the most popular materials used for soil for bonsai trees.

              Akadama is a fired clay that retains its form when dry and absorbs water
when wet.

              This provides the tree with moisture while preventing compaction.

               Akadama provides excellent drainage and aeration for healthy root growth.

              It's an ideal ingredient for every soil mix and works with all bonsai
trees.</p><p style="font-size: large;">Rs.800</p>

<h1>Boxwood Bonsai </h1>

<p>A popular shrub, the evergreen boxwood makes an excellent bonsai specimen.

    Hardy and mistake-resistant, this beginner-friendly plant is perfect for growers looking for a low-risk foray into the practice.

    The boxwood bonsai naturally grows in a gnarled fashion and produces deadwood with ease.

    Its weathered appearance and high tolerance to styling techniques means with little effort you can create a stunning specimen that is truly one of a kind. </p>

<p style="font-size: large;">Rs.2700</p>

<h1>Holly Goshiki Bonsai </h1>

<p>Holly is a species of flowering plant from eastern Asia in central and southern Japan and Taiwan.

It is an evergreen shrub or small tree growing to 2–8 m tall.

The bark is brown to grey or blackish, cracking into small plates on old plants.

The leaves are opposite, 3–7 cm long and 1.5–4 cm broad with a thick, leathery texture, lustrous dark green above, paler yellow-green below. </p>

      <p>
         This Small Lava rock is commonly used in bonsai soil to prevent from compaction.
         The smaller lava rock is a traditional ingredient added to Bonsai soil.
         Lava rock will not break down over time. I
         t is non toxic and completely reusable which makes it an ideal component for soil mixes.
         The porous structure of the lava rock also allows for water retention.
          Ideal for junipers and pines bonsai.</p><p style="font-size: large;">Rs.1050</p>

<h1>Pomegranate Bonsai</h1>
<p>
    The pomegranate tree  makes a very popular bonsai.

    These resistance and tolerance to grow in cooler temperatures.

    Pomegranate is also a flowering and fruit-bearing tree, which is a real treat to work
with.

     The trunk of pomegranate trees has a natural twist, making it an amazing bonsai.

    <h1>Rock Juniper Bonsai Tree</h1>
    <p>

        Rock juniper bonsai thrive in different variety of environments.

        These can be found in dry, rocky locations planted in stony soils.

        Grazing animals and the villagers are rapidly using up these plants.

         Due to several important features of the leaves and wood of this bonsai that cause
villagers to cut down these trees and make use of them.</p>

   <h1>Sago Palm Bonsai </h1>

   <p>Sago is a species of gymnosperm from southern Japan including the Ryukyu
Islands.

      It is one of several species used for the production of sago, as well as an
ornamental plant.

       The sago  can be distinguished by a thick coat of fibers on its trunk.

      The sago plam is sometimes mistakenly thought to be a cycad, although the only
similarity between the two is that they look similar and both produce seeds.</p>

padding-top: 10px;">

    <h1 style="padding-top: 30px;

    font-size: 85px;

    padding-bottom: 60px;">"Technology and its impacts"</h1>

    <p style="margin-top: 1px; font-size: 20px;line-height: 1.5;">Technology can be defined as the way we execute the discoveries of science around the world and use it with our own needs.

        Technology is a general term used to refer to the different tools, machines and equipment we use in everyday life.

        These tools and equipment have been invented by man to make the tasks faster and more comfortable. Technology is basically our daily needs

    nowdays due to its features and facilities. There always have been and always will be arguments for and against the uses of science and technology.

    One cannot sit in judgement and say that science has benefited man or taken him to the verge of destruction. There obviously are plenty of advantages and disadvantages

    of science and technology.This the age of science as it has changed the entire world by its congenial and comfortable ways of living. There is always a positive and

    negetive sides of something. Technology basically is one of them. </p>

    </div>

    <div style="width: 80%;

    margin: auto;

    padding: 150px;

    padding-top: 20px;">

    <h2 style="font-size: 50px;text-align: center;">Impacts:</h2>
 <!-- Inline Css for sub heading -->

    <p>No doubt technology has made our life more comfortable, beautiful and trouble free. The blessings of science are too many to count. Technology has basically

    conquered time and distance. There are technology and its features everywhere we go. From transportation to accommodation it's everywhere.

Technology affects almost every aspect of 21st century life, from safety to healthcare, socialization ,access to food and productivity.

The power of the internet has enabled global communities to form, and ideas and resources to be shared more easily anywhere around.

However, the overuse of some technology has made our world to a decline in mental health, increased social division privacy concerns and violence.

We take technology for granted everytime even when it has provided us all the basic needs form making a tea to sleeping peacefully in our bed.
 <!-- Blog Text -->

According to my brain, there are mainly 6 ways technology impacts our lives:

 <!-- Blog text -->

1)Transportation

2)Health and fitness

3)Marketing and transactions

4)Privacy protection

5)Socialization

6)Education facilities

</p>

<div style="display: flex;"> <!-- Flex created -->

<div style="float: left;"> <!-- Making the card to float left -->

<h4 style="text-align: center;">1) Transportation</h4>

<img src="../pictures/Transportation.jpg" height="440px"; width="580px">

<p style ="text-align: left; height:250px; width:580px;">Nowdays almost everyone around the globe owns something for the transportation purpose.

It can be a car,bike,bicycle or even a private jet. Due to these inventions our day to day lives have been much easier and effecient.

"Let's go invent tomorrow instead of worrying about what happened yesterday" truly reflects todays modern transportation facilities.

Overall we can say that in this 21st century without technology mobility wouldn't have been a thing and life wouldn't had been easier

179

as it is now. Technology has surely improved the mobility in this 21st century.</p>

</div>

<div style="float:right; padding-left: 200px;"> <!-- Making the card to float right -->

<h4 style="text-align: center;">2) Health and fitness</h4>

<img src="../pictures/health and fitness.jpg" height="440px"; width="580px">

<p style ="text-align: left; height: 250px;width: 580px;">As for health,technology helped alot in this field.In this 21st century as the technology has been increasing day by day diseases have been increased alot

everywhere around the globe. People are getting sick and being affected by different kind of illness.This is where technology comes in rescue.There are different advanced technology

that are being used for curing these diseases.EKG/ECG Machine,Anesthesia Machine,Sterilizers are some of advanced technology being used nowdays.These equipments help us to be cured

anytime and anywhere whenever we need.Hospitals and different health organizations are also being advanced by using these technologies. we can say that technology has helped us to

be fit and healthy.

</p>

</div>

</div>

<div style="display:flex;">

<div style="float:left;"> <!-- Making the card to float left -->

<h4 style="text-align: center;">3) Privacy protection</h4>

<img src="../pictures/privacy.jpg" height="440px"; width="580px">

<p style ="text-align: left; height: 250px;width: 580px;">Privacy has been probably everyone's main concern nowdays.As the technoloy is becoming more and more advanced people are facing privacy disturbance.Human beings

value there privacy and the protection of there persoal space of life. They certainly do not want their personal information to be accessible to just anyone at anytime. Recent advanced

technology threatens privacy and have reduced the amount of control over personal data and open up the possibility of a range of negative consequences as a result of access to personal data.

But at the same time these technologies have helped to secure our belongings and be aware from cyber crimes and malwares. Virtual Private Network(VPN), Antivirus Softwares, data encryption,

Firewalls, Ips are some of advanced technologies consistently helping us for our privacy concerns.Nowdays there are different kinds of courses for students like Networking, Computing,

Ethical hacking, cyber protection etc which helps in protecting our privacy. Students could learn these skils and help thereselves and others aswell to be secured and safe with their personal

belongings.</p>

</div>

<div style="float:right; padding-left: 200px;"> <!-- Making the card to float right -->

<h4 style="text-align: center;">4) Marketing and transactions</h4>

<img src="../pictures/marketing.jpg" height="440px"; width="580px">

<p style ="text-align: left; height: 250px;width: 580px;">Technology plays a very important role in terms of marketing.In this modern era marketing is all digital rather than physical. People have become more

intelligent and sharp minded. We promote our business through different technologies and its sources. Social medias, digital newspapers, advertisments are some of them. This has helped people

buy and sell products easily and more conveniently.Technology has also helped us in transactions of our purchases. We are gradually evolving and switching into online payments and cards rather

than using cash. This helps in envirement protection also which is a plus point. Conveniency is always there in this method of payment as it is more secure.Therfore, technology has changed

181

our way of living.The marketing process begins with knowing the customers desires until a business can create a product or offer a service that can meet and satisfy them. Happier customers

lead to higher profits.Good business makes people happy. When more people are happy, the better society becomes.</p>

</div>

</div>

<div style="display:flex;">

  <div style="float:left;"> <!-- Making the card to float left -->

    <h4 style="text-align: center;">5) Socialization</h4>

    <img src="../pictures/socialization.jpg" height="440px"; width="580px">

    <p style ="text-align: left; height: 250px;width: 580px;">Technology has enabled the growth of social medias to do business and more. Mediums such as telecommunications, instant messaging, social networking sites, or the World Wide

 Web have become an crucial part of our lives. Businesses can now interact with their customers easily and provide their products and services in a much better and easier way with the help of modern technology.

As the technology is advancing day by day, we have revolutionized the ways in which we humans communicate to each other. Technology lends itself well to social media and is now used in messaging systems,

telecommunications networks, Voice over Internet protocol communications, videoconferencing, online chats, interactive message boards, websites, blogs and most other forms of social interaction. We can

talk more effeciently with our relatives and friends due to this technology. We can get different kinds of news from all over the world using social medias, televisions, and different other information

sources. Thanks to technology each person with marginal views can see that he is not alone. When these people find one another via social media, they can do things like creating memes, publications,

and entire online worlds that boosts their worldview, and then break into the mainstream of life. This really helps in changing our thougts about negative impacts of technology if we use it in correct

manner.</p>

```
            </div>

            <div style="float:right; padding-left: 200px;"> <!-- Making the  card to float right
-->

                 <h4 style="text-align: center;">6) Education facilities</h4><br>

                 <img src="../pictures/education.jpg" height="440px"; width="580px">

                 <p style ="text-align: left; height: 250px;width: 580px;">Technology has
impacted almost every aspect of life today, and education is no exception. In some
ways, education seems much the same as it has been for many years but the

                 fact is that the way people are getting the education or we can say the
source is being revolutionized. Nowdays almost everyone is familier with google. It is an
platform where we can get the answers of almost

                 everything. Technology helps to gain the education by different sources like
webs, online searches, online tutors, and many more virtually. AI(Artificial Intellegence)
is one of the primary example of how

                 technology has changed education levels. AI has done alot in education
feild as we are getting modernized and education is expanding day by day.Technology
has also begun to change the roles of teachers and learners.

                 Nowdays different kinds of technology applications such as smartphones,
laptops, computers are being used to provide education to the students as it is more
easier and convenient.Technology in education

                  helps prepare students with the career and technical skills they need to be
successful today and in their near future. Overall technology plays a vital role in terms of
education in this 21st cetury.</p>

             </div>

<p>

<h2 style="font-size: 30px;">PROS:</h2>
 <!-- Blog Texts-->

As i've said earlier technology has a great impact upon our life and the way we live. It has many advantages to be counted. These advantages are there to make our life easier and more comfortable.

Some of the advantages of technology are listed below :-

<h3>- Better communication</h3> <!-- Blog Texts -->

In earlier times, communicating with a person belonging to a different part of the world was difficult. Think about it! Think back to the time when people had to communicate using pigeons or letters, something that took

days or weeks! with a person sitting in another corner of the world, all thanks to technology. Nowdays almost everyone has a smartphones around the world and its easier nowdays to communicate with our friends and families

far away from us with the help of these technologies.

<h3>- Saves time and money</h3> <!-- Blog Texts -->

A very important advantage of technology is that it saves time as well as money. As we are able to complete a task in lesser time, we can utilize the time saved for other important activities. With the help of technology a lot

 of activities such as cooking, cleaning, working, commuting are accomplished faster. Advertisements are being digital and less time consuming as well, overall technology has a big impact on how all the basic tasks are well

managed and developed nowdays.

184

<h3>- Reduces cybercrime risks</h3> <!-- Blog Texts -->

The biggest benefit of technology is to the cyber world. AI (Artificial intelligence) algorithms are qualified to detect a change in unique from the normal pattern. Implementing AI to detect is still at an early stage, but technology,

 one can expect to prevent it. Hence the chances of getting a cyber-attack are reduced. AI has made our living more comfortable and quality of life is well defined.

 <h3>- Improves efficiency for Business</h3> <!-- Blog Texts -->

The best advantage of any technology is that it increases the efficiency of a business process.

We can perform more tasks in less time. From shared drives to emails, communication, execution and implementation of a lot of business processes has become swift and hassle-free. Business nowdays are being

more modernized and easier, all thanks to technology.

<h2 style="font-size: 30px;">CONS:</h2>
 <!-- Blog Texts -->

If there is a positive side of something, there always is a negative side aswell. Same with technology, there are some negative impacts of technology in our society.These negative impacts of technology is being listed by observing

the current scenario in our lives around the world. Some of the disadvantages are listed below:-

<h3>-Extreme dependability</h3> <!-- Blog Texts -->

With each passing day, we are becoming more and more dependent on technology for almost every task without even realizing it. A common example of this is using a cab service. Another example is using GPS to know the

directions of any desired location. A lot of people today do not bother learning or memorizing directions because they depend on Google Maps for it. In a lot of ways, thats not a good path we are going down.

<h3>-Expensive</h3> <!-- Blog Texts -->

185

Although technology is already a part of many peoples lives, there are still some people out there who cannot afford some technologies. Many technologies that are being used by the organizations are expensive. As a results,

 one of technologys biggest cons is that it can only be used by those who can afford it.

 <h3>-Malfunctions</h3> <!-- Blog Texts -->

The biggest disadvantage of technology is that all are machine driven. And a minor lapse in the functioning can create a situation that cannot be controlled. So, a minor malfunction may cause a complete failure which can

cost a human life as well.Now that we have discussed how technology benefits us and also the disadvantages of technology today, we are confused about whether to perceive it as a boon or bane. Only time can validate the future of technology.

 We also think that as global citizens, we have a responsibility of allowing certain technologies into our lives.

<h3>-Shortage of jobs</h3> <!-- Blog Texts -->

With technology, the efficiency of a task has increased tenfold and this is the reason why the technology might be able to replace humans soon. An increase in technology is going to ensure that tasks that humans could do

earlier can now be achieved by machines and technology. Thus, creating a shortage of jobs.Nowadays even organizations prefer technology that is capable of doing tasks more efficiently than humans. Thus, with the rise of technology

humans can be replaced by algorithms and robots, but in education, it is still a long way off. After all, a machine will not be able to write and proofread a thorough text like a professional essay writing service.

</p>

        <div>

        <h1 style="text-align: center; font-size: 80px;">"Why IT is importatnt to you?"</h1>
 <!-- Proper css for sub heading-->

        <h4><p>Information systems are important to you for a variety of reasons. First, information systems and information technologies are integral to your life. Second, the IS field offers many career opportunities. Finally, all functional areas in

186

an organization utilize information systems. Information Systems and Information Technologies Are Integral to Your Lives

There are many examples of how information systems and technologies are embedded in your lives. For example, think of all the things you can do online.

- Register for classes.

- Take classes, and not just classes from your university. Access class syllabi, information, PowerPoints, and lectures.

- Research class papers and presentations.

- Conduct banking. Pay your bills.

- Research, shop, and buy products from companies or other people.

- Sell your stuff."

- Search for, and apply for jobs.

- Make your travel reservations (hotel, airline, rental car).

In addition to all the activities you can perform online, there are other examples of how information systems and information technologies are essential to your daily living. For ex- ample, you may not use a regular wireline telephone.

Rather, you use a smartphone that has a calendar, an address book, a calculator, a digital camera, and several types of software to download music and movies. This phone enables you to seamlessly switch between different wireless modes

(Bluetooth, Wi-Fi, cellular, and/or Wi-Max) to communicate by voice, e-mail, instant messaging, and text messaging.

187

Going further, you have your own blog, and you post your own podcasts and videocasts to it. You have your own page on FaceBook. You make and upload videos to You Tube (now Google Video). You take, edit, and print your own digital photographs.

You "burn" your own custom-music CDs and DVDs. You use RSS feeds to create your personal electronic newspaper. The list goes on.

</p></h4>

</div>

<div>

<h1 style="text-align: center; font-size: 80px;">"Future of Technology"</h1>
<!-- Proper css for sub heading-->

<p>

Technology moves at a rapid pace these days. It can sometimes feel like every single day there is a new technology that is going to revolutionise the future. But with so many massive technological upgrades happening all the time,

it is easy to lose track of the amazing ways the world is progressing. There are artificial intelligence programs writing poems from scratch and making images from nothing more than a worded prompt, there are bionic eyes, massive holograms

and food made in labs. All of this just scratches the surface of what is out there, so we've gathered the most exciting future technologies, listing them all below.

<!-- Some future technologies-->

<h3>1.) Necrobotics</h3>

Sometimes new future technologies can offer amazing development, with the possibility of changing the future while also being incredibly creepy.

This is one way to describe the idea of necrobotics which, as the name suggests, involves turning dead things into robots. While this sounds like a plot to a creepy horror film, this is a technology being explored at Rice University.

A team of researchers turned a dead spider into a robot-like gripper, given the ability to pick up other objects. To achieve this, they take a spider and inject it with air. This works because spiders use hydraulics to force their version

of blood (haemolymph) into their limbs, making them extend. Right now this concept is in its infant stages, but it could mean a future where dead animals are used to further science.

<img src="../pictures/necrobotics.jpg" height="440px"; width="580px">

2.) Xenotransplantation

The procedure of transplanting, implementing or infusing a human with cells, tissues or organs from an animal source - has the potential to revolutionise surgery.

One of the most common procedures performed so far is the insertion of a pig's heart into a human. This has now successfully happened twice. However, one of the patients was only alive for a few months, and the second is still being observed.

In these surgeries, the heart cannot be instantly put into a human, gene-editing needs to take place first. Certain genes need to be knocked out of the heart and human genes need to be added, mainly around immune acceptance and genes to prevent

excessive growth of heart tissue. Right now, these surgeries are risky and there is no certainty around success. However, in the near future, we could see xenotransplants happening on a regular basis, providing hearts or tissues from animals to humans in need of it.

<img src="../pictures/xenotransplantation.jpg" height="440px"; width="580px">

3.) Intelligent exo-skeletons

Exo-skeletons have existed for years, both in popular science fiction and real life. But as the years have gone on, the technology has rapidly become more impressive.

Most notably in recent years, we have seen the technology now become more readily available for the young. The Atlas 2030 is described as the most advanced mobile medical exo-skeleton designed specifically for children.

While it is not commercially available yet, this technology could aid children in the future, offering a pediatric lower-body medical exo-skeleton. This could help children with severe neuromuscular diseases, cerebral palsy or spina bifida walk.

<img src="../pictures/Intelligent exo-skeletons.jpg" height="440px"; width="580px">

4.)3D printed bones

3D printing is an industry promising everything from cheap house building through to affordable rugged armour, but one of the most interesting uses of the technology is the building of 3D printed bones.

The company Ossiform specialises in medical 3D printing, creating patient-specific replacements of different bones from tricalcium phosphate, a material with similar properties to human bones.

Using these 3D printed bones is surprisingly easy. A hospital can perform an MRI which is then sent to Ossiform who create a 3D model of the patient-specific implant that is needed. The surgeon accepts the design and then once it is printed, it can be used in surgery.

What is special about these 3D printed bones is that because of the use of tricalcium phosphate, the body will remodel the implants into vascularised bone. That means they will enable the full restoration of function that the bone it is replacing had. To achieve the

best integration possible, the implants are of a porous structure and feature large pores and canals for cells to attach to and reform bone.

<img src="../pictures/3D printed bones.jpg" height="440px"; width="580px">

<h3>5.) Hydrogen planes</h3>

Carbon emissions are a huge concern when it comes to commercial flights, but there is a potential solution and it has received a lot of funding.

A £15 million UK project has unveiled plans for a hydrogen-powered plane. This project is known as Fly Zero and is being led by the Aerospace Technology Institute in conjunction with the UK government.

The project has come up with a concept for a mid-size plane powered completely by liquid hydrogen. It would have the capacity to fly roughly 279 passengers halfway around the world without stopping.

If this technology could be actualised, it could mean a zero-carbon flight with no stops between London and Western America or London to New Zealand with a single stop.

<img src="../pictures/Hydrogen planes.jpg" height="440px"; width="580px">

We take great pride in this incredible journey of our's to provide our customers with their fated plants. This whole business of plants and smiles started out as just the wild idea of four college graduates and now we have come so far into this journey that the start seems vivid. Over the years we have supplied many households and offices with different types of bonsai plants. So, we have been blessed enough to have successful cooperation with many clients. This journey was started just to be a method of income. But now it has turned into something much more than just about capital. We have connected to so many people and truly feel blessed for these connections. We hope that this trend continues for many years to come.
